Pathways, Components, or Threats Not Evaluated

The Hazard Ranking System (HRS) evaluation performed on the Sauget Area 1 site (Figures 1 and 2 of the documentation record) addresses the threat of contamination of air and surface water.

Ground water data indicates that ground water contamination attributable to the Sauget Area 1 site is present. However, the ground water pathway is not being evaluated because ground water is not used as a drinking water source in the area resulting in minimal target values for this pathway.

Several residences are located adjacent to and have unrestricted access to portions of the Sauget Area 1 site. However, the soil exposure pathway is not being evaluated because areas of contaminated soil attributable to the site have not been documented on residential properties resulting in minimal targets for this pathway.
